DevOps Engineer

We are looking for a DevOps Engineer to join IT department. As a DevOps Engineer, you will play a key role in designing, facilitating and maintaining our new cloud-based infrastructure running currently on AWS as well as creating microservices in Java.

How you describe your team to your friends

"I work in a backend team that is amongst the first in the company to make use of a new, cloud-based environment. For one, I develop microservices alongside my colleagues. In addition, I support my fellow team members with adequate technical solutions for their individual services. For me, it is especially important that all applications are properly tested, monitored and integrated on an automated deploy pipeline. As my team is working with mostly new technologies using an event-driven architecture, I usually have to invest some time in researching solutions and best practices. Even though I am an expert in optimizing and automating infrastructure, I still enjoy the development of java based microservices. I enjoy working alongside my team members, teaching them what I know best and learning from them what I have yet to master."

The position

• Deploy and maintain cloud infrastructure (AWS)

• Suggest and provide infrastructure solutions catered to the team's needs

• Configure and integrate services into our deployment pipeline

• Collaborate closely with our dedicated cloud infrastructure and security team

• Develop, test and deploy restful APIs

Your profile

• You have 1,5+ years of experience as a SysOp or DevOp, including at least 1 year of

work on projects using Kubernetes.

• You have 1,5+ years of experience working with apache Kafka or similar distributed

streaming platforms.

• You have 1,5+ years working experience with relational (e.g. MySQL) and

nonrelational databases (e.g. Elasticsearch).

• You have working experiencing integrating and maintaining monitoring solutions (e.g. Prometheus).

• You have first-hand experience in building RESTful services in Java for production.

• You are a good communicator who enjoys pair programming.

Our Offer

• As you'll be joining a young team, you will be constantly presented with novel puzzles and will be unfettered by legacy code

• You'll become part of a team that prides itself in owning its stack and you'll have the opportunity to make your voice heard during technical and design discussions - your opinion will count.

• Company contribution toward your pension saving

• Awesome (global) team events like the summer party, skiing trip and more!

• Table football, billiard and Playstation in the kitchen

• Contribution to your travel cost with the amount of the BVG monthly abonnement

• An attractive location with roof terrace close to Potsdamer Platz

• Workshops, conferences and training seminars to support our growing team

• Inhouse German language courses
