

Senior iOS Developer (m/f)

We are looking for a motivated and experienced iOS Developer, who gets excited tackling challenging problems, is willing to take responsibility and loves working with talented people. New features and improved functionality are waiting for you!

A day in the life of...

You start your day by checking the Crashlytics board. You shipped a new version yesterday, and after checking on the status of it you high five your colleague - the two of you have paired up working on it - and rush to the daily standup. Our iOS expert walks in, and brought one of his homemade cakes to celebrate the release. After the cake you have a talk with your product owner about the new feature you are working on. It looks good, but it misses that “wow factor”. Later that day you have a meeting with the Designer for a brainstorm session. During lunch your teammate asks if you have some time for pair programming, he is stuck with some concurrency issues and could really use some help. That works, but remembers at 3 PM, there is a presentation about iOS Application Architectures.

Your profile

- You have fully embraced Swift while still knowing your way around in Objective-C
- You have at least 4 years of professional iOS development experience
- You are familiar with distributed source control and continuous integration tools and services
- You care about writing clean code and proper unit tests
- You have released at least one app on the App store or have a project that you can tell us about
- You have proven experience using design patterns other than MVC
- You are not afraid to explore new technologies, weigh their pros and cons, and share your insight in the team
- You have worked in cross-functional teams in an agile environment
- You are fluent in English (verbal and written)

What we offer

- The opportunity to work in a really international workplace and the chance to travel to visit our other office all over Europe
- Being part of a unique, professional, and culturally diverse team who loves to learn and share knowledge
- Workshops, conferences, and training seminars to support our growing team
- Custom workstations/laptops (Mac/Linux/PC) so you can get the job done
- Free drinks, fruit and awesome team events
